

OptoBERT™ OPB5000

5Gbps Compact Bit-Error-Rate Tester

Overview

The OPTELLENT OptoBERT™ OPB5000 is a cost-effective easy-to-use bit-error-rate tester (BERT) for testing datacom ICs, devices, components, modules and systems in R&D and manufacturing environments as well as field installations of Storage Area Networks (SANs). OPB5000 supports 4GFC, 2GFC and 1GFC. The OPB5000 tester is also ideal for Gigabit Ethernet, Infiniband (2.5G) and PCIe testing. It incorporates a pattern generator, clock recovery circuits, and a bit-error-ratio analyzer in one compact module that provides optical and electrical interfaces at up to 5Gb/s.

An intuitive graphical user interface (GUI) enables easy point-and-click operation. The GUI displays error counts, BER, and related statistics.

The OptoBERT has a recording feature to output the measured BER results into a spreadsheet file without any programming or scripting.

Applications

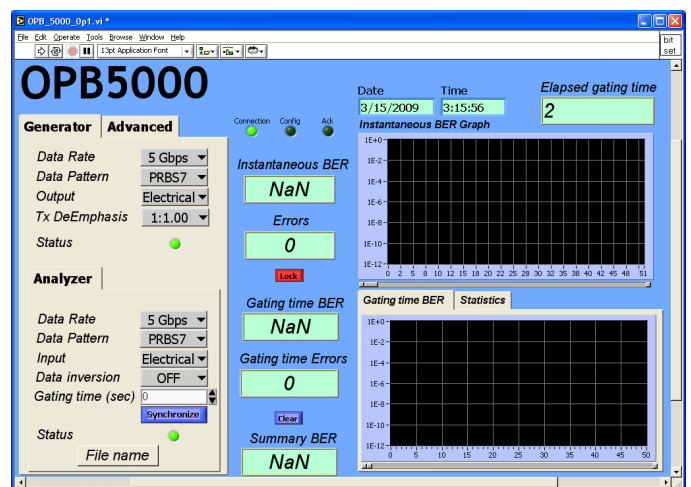

- ▶ Optical/electrical testing of ICs, components, modules and systems for 1x, 2x and 4 x Fibre Channel (FC), Gigabit Ethernet, Infiniband, PCIe
- ▶ Installation testing and troubleshooting of Storage Area Networks (SANs)
- ▶ Cost-effective solution for manufacturing testing of Fibre Channel transceivers, eliminating expensive traditional BER test equipment in production lines

Key Features

- ▶ Electrical and optical interfaces
- ▶ Internal Clock Recovery
- ▶ PRBS, Stress and User patterns
- ▶ Transmit De-emphasis option
- ▶ Automated Measurement Report
- ▶ Easy-to-use and Cost-efficient

Software

The OptoBERT™ OPB5000 software runs on Windows 98/2000/NT and XP over RS-232 serial interface via an RJ-45 Connector provided on the front panel. A Serial-to-USB converter can be used if a USB port is available. A software driver is available for incorporating the OptoBERT into test automation suites using programs like C++, LabVIEW, VisualBASIC, and HP VEE.
